

Colorado HITECH Training Model for Incumbent Healthcare Professionals

Background

- Colorado initially implemented 6 month credit training programs that mapped to the ONC curriculum
- Met with Healthcare Providers to assess their needs for EHR training and the relevance of our 6 month certificates
- Result was the majority of the providers were defining training requirements not based on workforce roles but rather in terms of “a phase of EHR implementation” (ie: pre-implementation, implementation, meaningful use phase 1 etc.)
- This model was developed based on meeting those needs with **“just the right amount of training”** at **“just the right time”**
- Each of our training units is mapped directly to ONC components
- Healthcare Professionals are receiving ONC approved training based on immediate need and availability of their people resources
